I'll definitely keep that in mind for the next one. If I was involved again would be interested in setting up an account for the response that the PIO or CIC can use to keep up with message boards and post our information everywhere we can.

No apology needed. Really. Your instinct that EPA may have wanted to 'call in' or post some comments on the message board of this program is a good idea. But would have needed to be planned in advance. Bonnie

I apologize—I made a mistake thinking it was the CSB rep who said EPA was nowhere to be seen—Melissa corrected me about it being reporter Ken Ward.

Chemical Safety Board rep just said that the EPA has been nowhere to be seen. They have been sitting right next to our OSCs in the field. Now they are talking about EPA's role—where it EPA

in this interview? This is appalling. Can someone call in?
